It's my privilege and honor to write the editorial of a newly enterprising title "**Imaging Journal of Clinical and Medical Sciences (IJCMS)**." "**Peertechz**" has done an excellent work again. We are already enamored by an overwhelming response from various authors throughout the globe. Again I will say it's just the beginning of a new endeavor.

IJCMS is a peer-reviewed international journal, with the main purpose to provide a scientific platform for the publication of papers documenting recent advances and new developments in the field of radiology in medicine and biology, as well as regularly updating on existing modalities and scenarios.

The scope of this journal encompasses but is not restricted to diagnostic radiology, interventional radiology, radiation oncology, nuclear medicine, radiation physics, and radiation biology. Additionally, the journal covers technical and industrial innovations too. The journal invites original research and review articles, pictorial essays, pictorial interludes, case reports, letters, editorials, radiological practice and other radiological articles. Authors are invited to contribute in any of the following disciplines:

- Cardiopulmonary Imaging
- Gastrointestinal Imaging
- Genitourinary Imaging
- Musculoskeletal Imaging
- Neuroradiology/Head and Neck Imaging

- Nuclear Medicine and Molecular Imaging
- Pediatric Imaging
- Vascular and Interventional Radiology
- Women's Imaging

IJCMS informs its readers of timely, pertinent, and important topics affecting the practice of diagnostic radiologists, interventional radiologists, medical physicists, and radiation oncologists. In so doing, **IJCMS** improves their practices and helps optimize their role in the health care system. By providing a forum for informative, well-written articles on health policy, clinical practice, practice management, and education, **IJCMS** engages readers in a dialogue that ultimately benefits patient care.

Our well qualified editorial members and open-access policy promises early facilitation of publishing quality articles.

It aims to communicate to its readers, state-of-the-art information on imaging developments in the form of high quality original research articles and timely reviews on current developments in the field. Its audience includes clinicians at all levels of training including radiology like the trainees, newly qualified imaging specialists and the experienced radiologist. Its aim is to inform efficient, appropriate and evidence-based imaging practice to the benefit of patients worldwide.

I hope and believe that the upcoming days with you will be as fruitful and as pleasant with more and more scientific entanglement.
