[Treatment of Toenail Onychomycosis using Laser Pharmacology™](#)

Published On: January 29, 2021 | Pages: 001 - 006

Author(s): Kerry Zang, Travis M Sammons* and Steve Shanks

Background: Onychomycosis is a common infection of the nail bed that can negatively affect patient quality of life. The complete cure rate for systemic drugs is 23-37 % while the complete cure rate for topical drug therapy with efinaconazole is 27.7%. Laser Pharmacology™ presents a promising alternative using a dual-diode laser employing wavelengths of 635 nm and 405 ...

[Acquiring accidental aspergillosis](#)

Published On: November 24, 2021 | Pages: 007 - 009

Author(s): Mitchell S Davis*, Lydia Shedlofsky and Christine C Lin

Aspergillus is an all-pervasive mold with the potential to cause severe invasive infections in the immunocompromised. A rare cutaneous manifestation of Aspergillus infection, primary cutaneous aspergillosis (PCA), occurs in just 1-5% of invasive aspergillosis cases. Prompt treatment is indicated as PCA may progress to a disseminated state. We present a unique case of ...
