[Characterization of recessively inherited X-Linked ichthyosis in Bajaur Agency](#)

Published On: March 22, 2023 | Pages: 001 - 006

Author(s): Ubaid Ullah, Abdul Waheed Shah, Midrar Ullah and Inaam Ullah*

Background: Recessively inherited X-linked Ichthyosis (XLI) is the second most generic form of Ichthyosis and is characterized by scaly, dry, thickened, and mild erupted skin. It is caused by a mutation in the STS gene ensuing lower production of Steroid sulfatase. A current study was performed to characterize XLI and its complications in patients of Bajaur Agency, Pa ...
